***Installing LED 3<sup>d</sup> Brake light***  
***By LXEDITION***

Tools:

Philips screw driver  
Small flat head screw driver  
Clear Silicone or double sided tape

Duration:

10 to 15 minutes

1. Unscrew and remove the 2 plastic retaining clips on the top hatch molding:

2. Next unscrew the two screws that hold the 3<sup>rd</sup> brake light in place. Remove the brake light and unplug the harness:

3. Now take apart the brake light. Remove the light bar and the red housing from the reflector.

4. Next remove all the bulbs from the bar and place the bar back in the reflector. Take the LED brake light and insert the connector into one of the light bulb connectors.

5. Next plug the light in and test it before you put everything back together (If it doesn't light up try reversing the connector). Once tested unplug it add some double sided tape or clear silicone to hold the LED light to the reflector. Place the red housing back on the reflector and put everything back together.
